

Tramite il dvwa di meta, ho usato i vari tag html per cambiare testo in vari modi inserendoli nella casella del xss

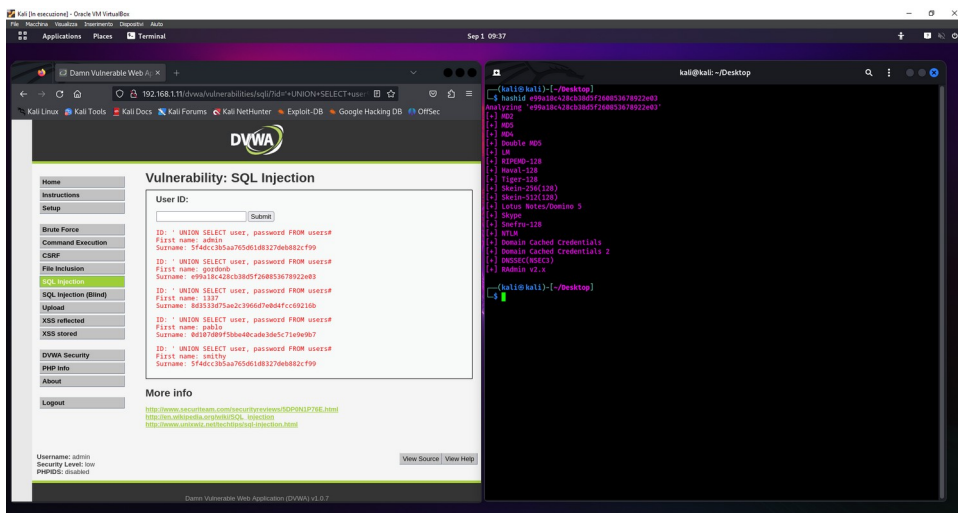

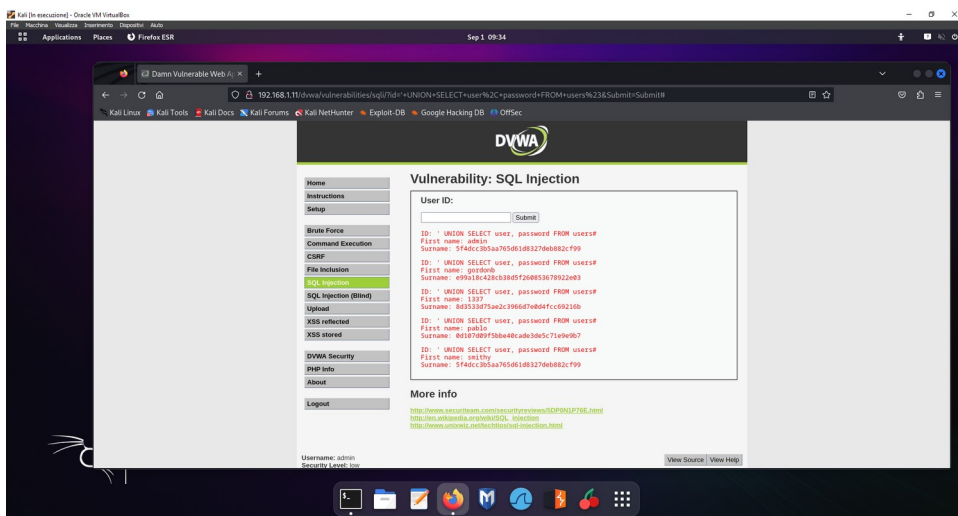

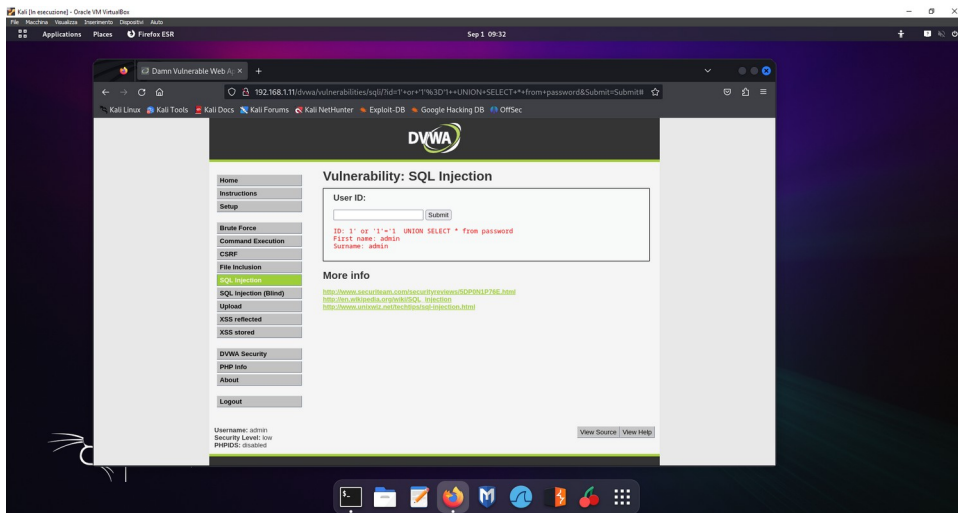

la casella con Hacking in progress, indica che ho usato sempre in xss i tag java script e non solo qui in qualche foto avanti ci sono sia i tag per il document.cookie per rubar e il cookie sia la scansione con burpsuite per trovare il cookie

ecco la 2 foto dove ce il cookie, la prima foto testo sql injection trovando user e nelle successive foto la versione

le ultime 4 foto da un database uso 1 sempre inserendolo nella sql injection casella, trovo un dato di un user, e poi faccio union qui e alla fine con il codice dopo vari tentativi per farlo funzionare uso hashid e inserisco il codice che ha utente per trovare le sue info su termianle
